Tank T-34 je tank střední velikosti vyvinutý Sovětským svazem před II. světovou válkou. Byl to největší tank v II. světové válce a také hlavní součást ocelové záplavy Sovětského svazu během II.sv. války

The T-34 tank is a medium-sized tank developed by the Soviet Union before World War II. It was the largest tank in World War II, and also the main component of the steel flood with the Soviet Union during World War II.

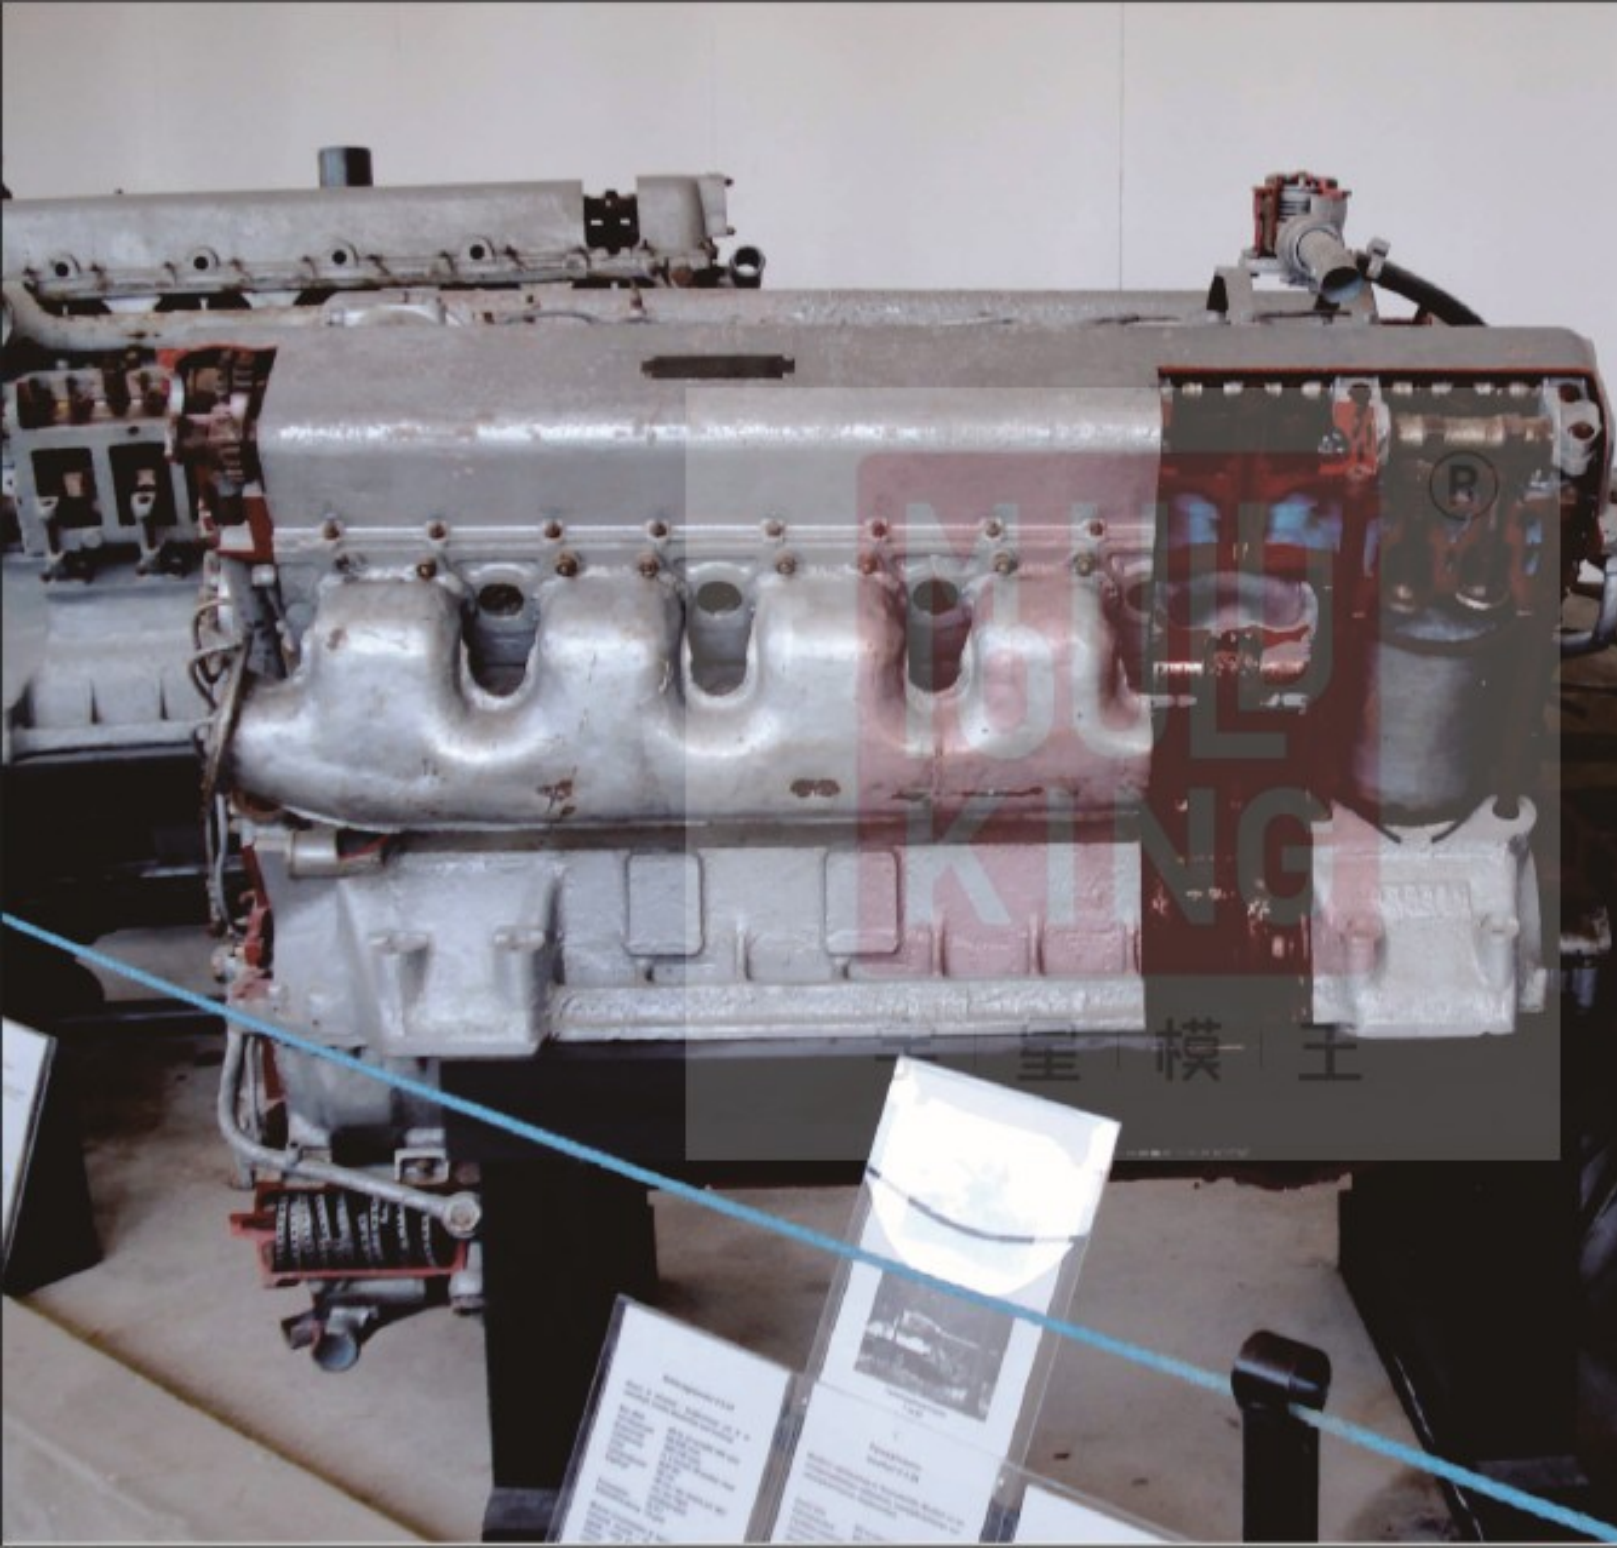

Tanky T- 34 byly vyvíjeny charkovskou konstrukční kanceláří Molozov v letech 1937 až 1940 a výroba začala v roce 1940. Do roku 1958 bylo vyrobeno celkem 84070 tanků.

T-34 tanks were developed by Kharkov Molozov Mechanical Design Bureau from 1937 to 1940, and began to be produced in 1940. A total of 84070 tanks were produced until 1958.

Tank T-34 je známý jako legendární tank. Účastnil se významných válek, jako byla II. světová válka, Korejská válka, Vietnamská, Jugoslávská válka, Libyjská válka. Vietnamská válka v roce 1979 a třetí Arabsko - Izraelská válka.

T-34 tank is known as "legendary tank". Participated in the Second World War, the Korean War, the Vietnam War, the Yugoslav War, the Libyan War, the 1979 Self defense and Counterattack War against Vietnam, the Third Middle East War and other major wars.

Tank T-34 váží 32 tun, je 6,1 m dlouhý a 2,9 metru široký. Výkon motoru je 500 koňských sil, maximální rychlost na silnici je 75 km/h, maximální dojezd je 400 km a je vybaven 76mm kanónem.

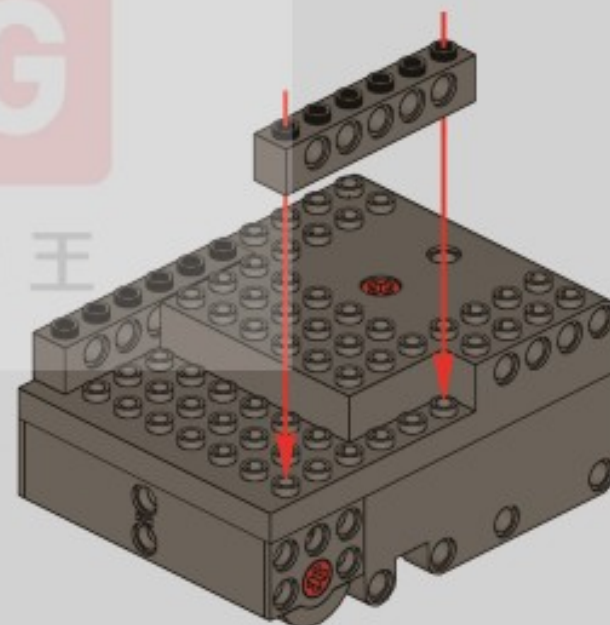

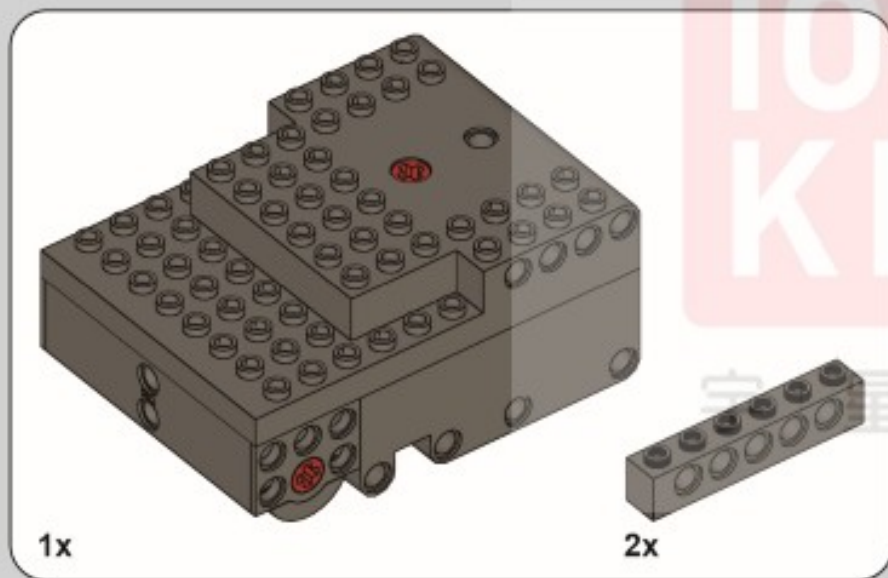

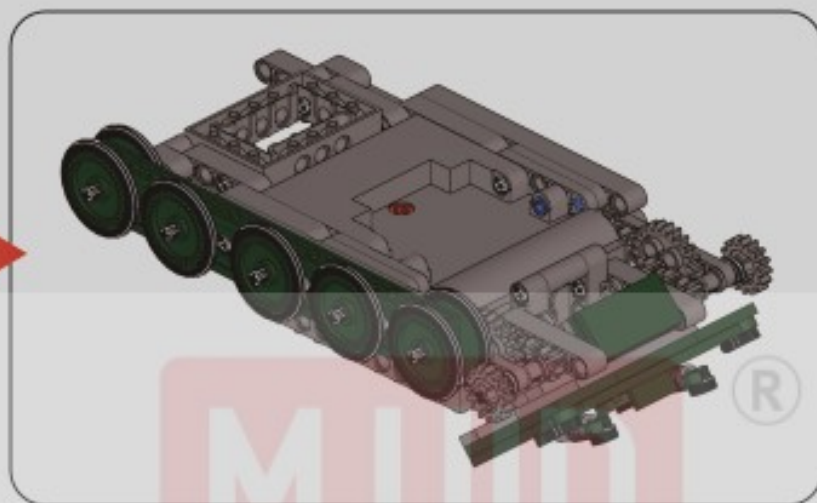

Je to tank s vynikající palebnou silou, ochranou a mobilitou. Existují hlavně dva typy: tank T-34/76 se 76,2 mm kanónem a tank T-34/85 s 85mm kanónem, Konstrukční myšlenka tanku T-34 se šikmým pancířem má dalekosáhlý a revoluční vliv na vývoj tanků v pozdějších generacích.

The T-34 tank weighs 32 tons, is 6.1 meters long and 2.9 meters wide. The engine power is 500 horsepower, the maximum road speed is 75 km/h, the maximum travel is 400 km, and it is equipped with a 76 mm tank gun. It is a tank with outstanding firepower, protection and mobility. There are mainly two types: T-34/76 tank with 76.2mm tank gun and T-34/85 tank with 85mm tank gun. The design idea of T-34 tank with inclined armor has far-reaching and revolutionary influence on the development of tanks in later generations.

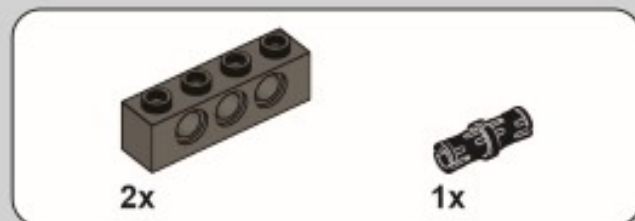

Sovětský konstruktér Morozov speciálně vyvinul pro tank T-34 slavný dvanáctiválcový vznětový motor V-2 o objemu 39 litrů, který má výkon 500 koní a umožňuje mu dosáhnout maximální rychlost 55km/h. Objem vznětového motoru V-2 je 1,87 metrů krychlových, objem celého motoru je 4,4 metrů krychlových. Uspořádání pomocných zařízení motoru a chladiče je relativně kompaktní. Další výhodou vznětového motoru V-2 je úspora paliva. Tank T-34 má objem palivové nádrže 460 l. A záložní palivová nádrž o objemu 39 litrů je umístěna na obou stranách korby, s dojezdem 540 km.

The Soviet designer Morozov specially developed the famous 12 cylinder 39 liter V-2 diesel engine for T-34, which has a power of 500 horsepower, making its maximum road speed reach 55 km/h. The volume of V-2 diesel engine is 1.87 cubic meters, and the volume of the whole motor is 4.4 cubic meters. The layout of engine auxiliary equipment and radiator is relatively compact. Another advantage of the V-2 diesel engine is fuel saving. The T-34 tank has a fuel tank capacity of 460 liters, and a 39 liter backup fuel tank is mounted on both sides of the body, with a travel of 540 kilometers.

Tato nálepka je termotlaková nálepka a nelze ji použít opakovaně.

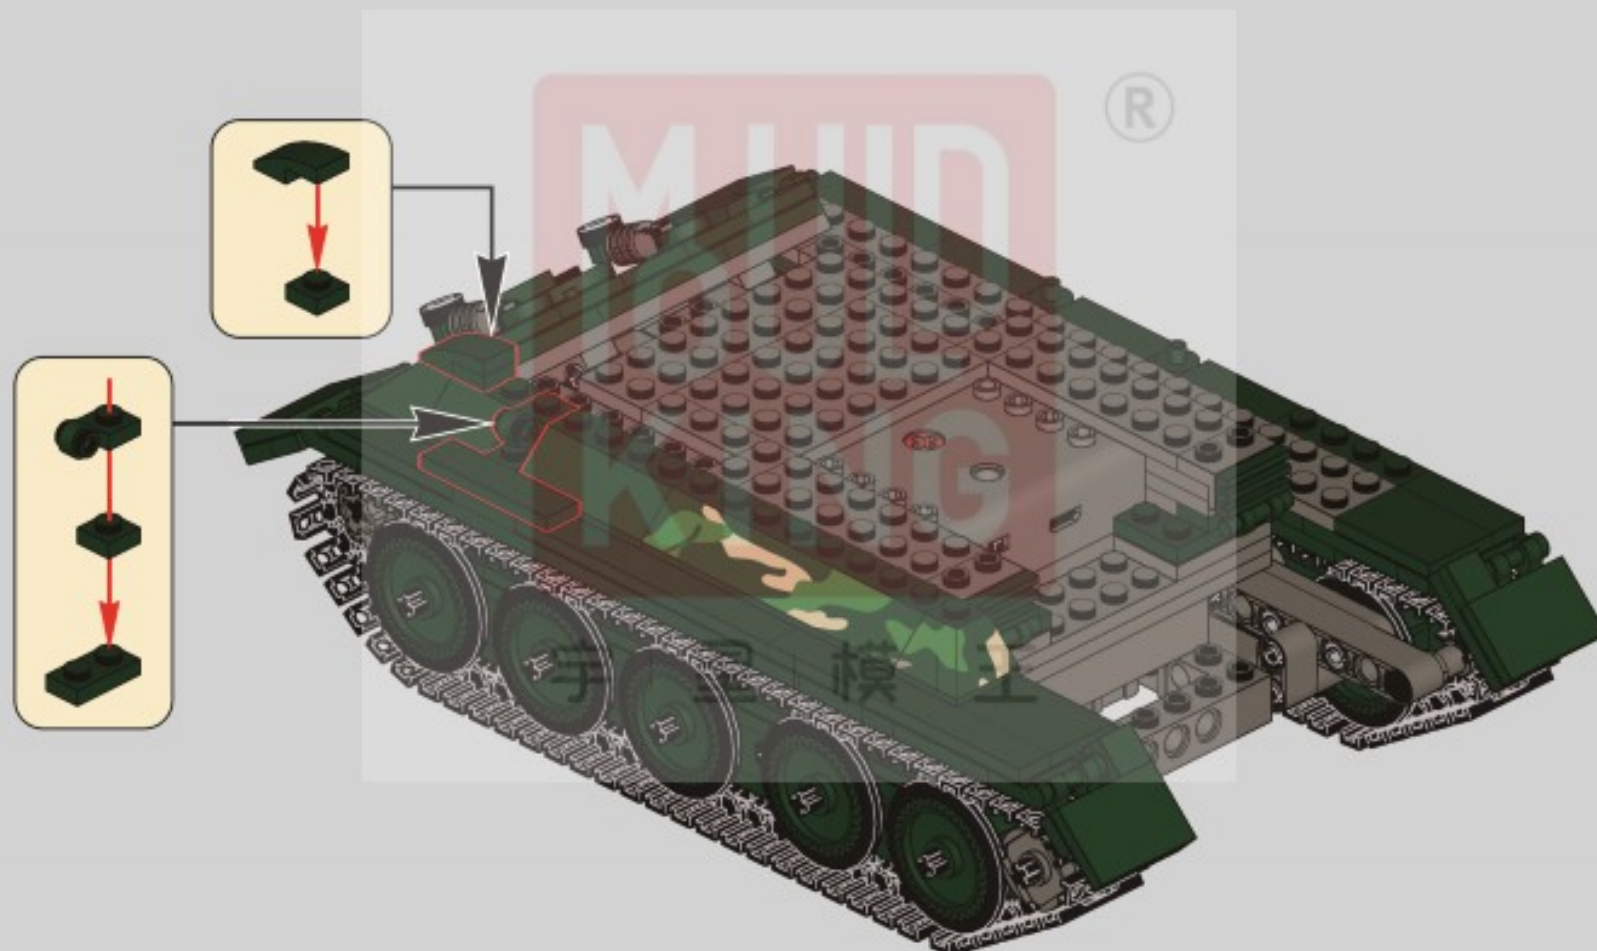

This sticker is a thermal pressure label sticker and cannot be pasted repeatedly

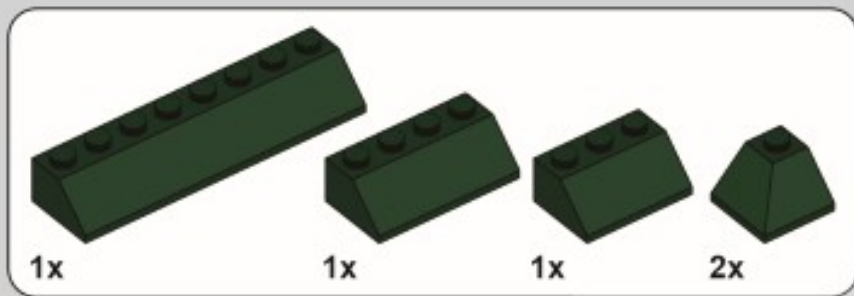

Jak použít: Odlepte nálepku, zarovnejte na požadovanou pozici, případně uhladte a odlepte transparentní film.

How to use the sticker: Tear off the sticker, align the position and then scrape it evenly, tear off the transparent film.
